

Probiotic Wound Care Kit

Product Information and Instructions for Use

Environotics' Probiotic Wound Care Kit provides the complex living nutrients that are necessary to heal wounds nature's way.

The basic kit includes the following:

- **Probiotic Spray:** Over 120 strains of microbes feed living biological nutrients to the wound site, increasing the body's ability to heal rapidly and well.
- **DMSO Spray:** 70% DMSO helps reduce pain from the wound, prepares the wound for treatment, and enhances the performance of the other products.
- **EMLC:** Essential fatty acids and amino acids are the building blocks of healthy new tissue. This product also keeps the wound supple so it won't dry out and crack.

Additional products you may have purchased:

- **Hydrogen Peroxide:** Pharmaceutical grade 3% hydrogen peroxide aids in wound repair through the oxidation process.
- **This Soap:** This Soap is an all-natural, biodegradable, pH balanced, non-stinging soap that works well to clean wounds without pain.

Instructions for Use:

1. Wash the wound area with a natural, non-stinging soap and gently rinse.
2. Treat the site with hydrogen peroxide if desired.
3. Pat or allow the wound to dry.
4. Spray the wound with Probiotic Spray and allow to dry for a few minutes.
5. Spray the wound with DMSO.
6. If the wound shows signs of drying and/or cracking, treat the area with EMLC to help it remain soft.
